

ABSTRACT OF THE DISCLOSURE

An electric beverage maker includes a lower, water boiling vessel, a funnel extending into the lower vessel and having an upper compartment for receiving a
5 beverage, and an upper vessel mounted over said funnel to receive water which has passed up said funnel through said compartment, and from which the beverage is dispensed. The lower vessel is formed with an opening in its lower region, which is closed by a thick film electric heater. The heater is controlled by a control which operates to disable the heater until such time as the control is reset manually by a user.
